AidKit Full-Stack Software Engineer January 2024 - present

- Delivered a suite of AI-backed tools including:
 - Automated message drafting to streamline support case management.
 - Document classification pipeline with custom document validation and real-time updates.
 - Bespoke prompt management and conversation generation pipeline allowing partners to author, iterate, and test prompts at scale.
- Designed and delivered a privacy-focused video calling solution with end-to-end data ownership using WebRTC and AWS Chime.

Elevation (formerly Curb) Software Team Lead July 2016 - December 2023

- Assisted in rearchitecting the Curb cloud system to a suite of microservices supporting 10K+ IoT smart meter devices and 800+ daily active users.
- Built UI dashboards for users to monitor their fleets of IoT devices and customers utilizing React and D3.
- Worked closely with the product team to develop functional product specs and translated those into technical design documents.
- Designed and implemented internal and public APIs to securely provide historical and real-time energy data using Node.js (Express) and Python (Flask).
- Wrote infrastructure-as-code with AWS CDK to manage the deployment of ECS services, Lambdas, single-page apps, and custom third-party resources.

GreenSync Software Engineer October 2015 - March 2016

- Maintained a customer-facing web application providing real-time electricity metering data, including interactive data visualization with D3.
- Wrote and maintained a suite of automated browser tests.

Atlassian Web Developer November 2014 - August 2015

- Developed front-end codebase for atlassian.com and associated web properties.
- Implemented a lightweight jQuery-based component library, custom CMS extensions, and streamlined development and build workflows.

Razorfish Senior Presentation Layer Engineer April 2012 - October 2014

- Developed public-facing custom web applications and CMS-backed websites for clients such as Samsung, Southwest Airlines, BlackBerry, and others.

Skills and technologies

Node.js TypeScript React Python AWS PostgreSQL MongoDB Websockets D3 OpenAI SDK

Three.js Redis WebGL

Education

University of Texas at Austin

B.S in General Kinesiology (Biology minor) - May 2010
